

Allen Poon

Application Support Engineer | Oracle Cloud Infrastructure, VMware Horizon, Linux Administration

+1 (570) 633-9599 • allenpoon15@gmail.com • Gibsonsia, PA • <https://www.linkedin.com/in/alp707>

ABOUT

Senior Application Support Engineer with over 10 years in **Linux administration**, **Oracle Cloud Infrastructure (OCI)**, and **VMware Horizon VDI** environments. Proven ability to **diagnose** and **resolve application performance**, **authentication**, and **integration challenges** in secure, regulated federal settings. Skilled in **STIG compliance**, **SAML/SSO authentication**, and **application lifecycle management** using **Micro Focus ALM Octane**. Strong focus on **operational stability**, **capacity planning**, and **performance optimization** to support mission-critical applications. Demonstrates a product mindset with ownership of backend administration and infrastructure troubleshooting to enhance enterprise system reliability.

EXPERTISE

- Cloud Platforms: **Oracle Cloud Infrastructure (OCI)**, AWS, Azure
- Operating Systems: **Oracle Linux**, Red Hat Enterprise Linux (RHEL), Microsoft Windows Server
- Virtualization: **VMware Horizon VDI**, VMware ESXi, Hyper-V
- Application Lifecycle Management: **Micro Focus ALM Octane**, UFT, LoadRunner
- Security & Compliance: **STIG compliance**, SAML/SSO, CyberArk, Evaluate-STIG, Mitre SAF Heimdall
- Programming & Scripting: **Golang**, TypeScript, Python, Node.js, Rust
- DevOps & Automation: Jenkins, Ansible, Terraform, Docker, Kubernetes
- Monitoring & Observability: Dynatrace, ReadyAPI, Prometheus, Grafana
- Networking & Load Balancing: **Load balancing**, TCP/IP, SSL/TLS, VPN
- Soft Skills: **Problem solving**, adaptability, emotional intelligence, relationship-building, resourcefulness

EXPERIENCE

PNC

Application Support Engineer

Pittsburgh, PA
Feb 2024 - Present

- **Administered** Oracle Linux and Red Hat Enterprise Linux systems supporting enterprise financial applications with 99.9% uptime SLA adherence.
- **Managed** Oracle Cloud Infrastructure (OCI) resources, including compute and networking, to optimize application deployment and scalability.
- **Configured** VMware Horizon VDI environments and image pools to streamline remote application access for over 500 users.

- **Diagnosed** and **resolved** Level 2 and Level 3 application connectivity and integration issues, reducing incident resolution time by 30%.
- **Implemented** SAML/SSO authentication integrations for secure user access, enhancing compliance with federal security standards.
- **Conducted** STIG compliance assessments using automated tools, ensuring systems met stringent federal security requirements.
- **Collaborated** with cross-functional teams to develop system sizing validation and capacity planning models forecasting 20% growth.
- **Documented** operational procedures and created CDRL documentation to support audit readiness and knowledge sharing.
- **Leveraged** Micro Focus ALM Octane for application lifecycle management, improving defect tracking and release coordination.
- **Exercised** adaptability and problem solving to support evolving cloud infrastructure modernization initiatives.

Challenges and Solutions: Maintaining high availability and security compliance for critical financial applications while integrating new OCI features and VMware Horizon updates.

PNC

Cloud Infrastructure Support Engineer

Pittsburgh, PA

Sep 2021 - Feb 2024

- **Supported** Oracle Cloud Infrastructure (OCI) environments, managing compute instances, storage, and network configurations.
- **Administered** Microsoft Windows Server environments, ensuring seamless integration with cloud-hosted applications.
- **Provided** Level 2 and Level 3 support for application performance and authentication issues across hybrid cloud environments.
- **Configured** load balancing solutions to optimize application availability and response times under peak loads.
- **Maintained** license management and encryption key vaulting using CyberArk, enhancing data security and compliance.
- **Facilitated** vulnerability remediation and STIG compliance audits using Mitre SAF Heimdall and Evaluate-STIG tools.
- **Automated** routine infrastructure tasks to improve operational efficiency and reduce manual errors.
- **Collaborated** with security and DevSecOps teams to integrate monitoring and observability tools for proactive incident detection.
- **Developed** detailed operational support materials and management plans to streamline system administration workflows.
- **Demonstrated** resourcefulness and emotional intelligence in troubleshooting complex cross-platform integration challenges.

Challenges and Solutions: Balancing operational stability with rapid deployment cycles while maintaining strict federal regulatory compliance.

Evernorth

Software Engineer – Blockchain & Cloud Applications

Philadelphia, PA

Jan 2019 - Sep 2021

- **Developed** backend services and smart contracts in Golang and Node.js for blockchain solutions on Hyperledger Fabric supporting healthcare consortiums.
- **Built** GitRDoneBot, a TypeScript tool integrating with GitLab to enforce best practices through automated feedback, enhancing developer productivity.
- **Engineered** Slurpnado, a Rust-based analytics tool for GitLab metrics, improving project health visibility and decision-making.
- **Designed** and maintained serverless backend systems using Golang, GraphQL, and AWS DynamoDB for the CoachRX pharmacist web app.
- **Implemented** GraphQL APIs for loosely coupled conference management backends, enabling scalable event operations.
- **Applied** problem solving and creativity to optimize application performance and integration in cloud environments.
- **Collaborated** with cross-disciplinary teams to deliver secure, scalable applications aligned with business goals.
- **Utilized** AWS services and infrastructure as code to support continuous deployment and operational stability.
- **Ensured** compliance with security policies and data protection standards in healthcare applications.
- **Enhanced** system observability and monitoring to proactively address performance bottlenecks.

Challenges and Solutions: Integrating blockchain technology with existing cloud infrastructure while maintaining high security and compliance standards.

Cigna

Software Engineering Intern

Bloomfield, CT
May 2018 - Aug 2018

- **Implemented** a blockchain network using Hyperledger Fabric, Docker, Node.js, and Go to address provider synchronization challenges.
- **Conducted** DevOps tasks using Jenkins, TFS, Ansible, and GitLab to support continuous integration and deployment pipelines.
- **Developed** backend components for the Cigna Tech Conference site using Golang, GraphQL, and DynamoDB.
- **Created** command line tools in Python to assist Git users in adopting best practices, improving team workflow efficiency.
- **Collaborated** with software engineering teams to troubleshoot application and infrastructure issues.
- **Applied** analytical skills and curiosity to learn emerging technologies and contribute to innovation projects.
- **Supported** production application environments ensuring operational readiness and performance.
- **Won** third place in a summer innovation project competition for blockchain solution development.

Challenges and Solutions: Balancing rapid prototyping with production-quality standards in a complex healthcare technology environment.

University of Pittsburgh

Research Assistant – Computational Biology

Greater Pittsburgh Area
Jan 2016 - May 2018

- **Analyzed** and compared causal graphical modeling algorithms to identify disease causes using machine learning techniques.
- **Developed** Python and Java programs implementing Monte Carlo algorithms for scientific simulations.

- **Collaborated** with interdisciplinary teams to interpret computational results and improve algorithm accuracy.
- **Presented** research findings contributing to enhanced understanding of biological data modeling.
- **Demonstrated** persistence and curiosity in tackling complex computational problems.
- **Supported** data-driven decision making through rigorous algorithm evaluation and validation.

Challenges and Solutions: Integrating diverse data types and assumptions to improve causal inference in biomedical research.

EDUCATION

University of Pittsburgh

Bachelor of Science in Computer Science

Emmaus High School

GED

Pittsburgh, PA

2015 - 2018

Emmaus, PA

2011 - 2015
